## FOREWORD

1. The Designated Airspace Handbook (DAH) is available free of charge, in digital format, on the internet at http:// www.navcanada.ca under the Publications/Aeronautical Information Products section on the NAV CANADA website. It will be updated every 56 days in its entirety.
2. A vertical line alongside an entry indicates new or revised information since the last issue of the manual.
3. This issue cancels and replaces all previous issues.
GENERAL
In accordance with the Canadian Aviation Regulations (CARs), Part VI, Subpart 1, airspace may be designated or
values of 5 or greater up and values of less than 5 down.
1.1.0-13 All altitudes are above sea level (ASL) and will be inclusive unless otherwise indicated e.g. 5000' to 10,000'. To indicate when either the bottom or upper altitude is not included, the words below and above are to be placed before the appropriate altitude e.g. above $5000^{\prime}$ to $10,000^{\prime}$ or $5000^{\prime}$ to below $10,000^{\prime}$.
1.1.0-14 Non-continuous segments in airways or air routes and some segments within US airspace are marked with an ellipsis (. . .).

### 1.3 GLOSSARY OF AERONAUTICAL TERMS AND DESIGNATIONS OF MISCELLANEOUS AIRSPACE

## ADVISORY AREA:

Airspace of defined dimensions within which a high volume of pilot training or an unusual type of aerial activity may be carried out.

## AIR DEFENCE IDENTIFICATION ZONE (See map page M6):

Airspace of defined dimensions extending upwards from the surface of the earth within which certain rules for the security control of air traffic apply.

## AIRSPACE CLASSIFICATION

Canadian Domestic Airspace has seven classifications. The application of any classification to an airspace structure determines the operating rules, the level of ATC service provided within the structure, and in some instances, communications and equipment requirements.

1. Class A

High level controlled airspace within the SCA, NCA and ACA. The horizontal and vertical dimensions of high level controlled airspace within these CTAs are illustrated on page M2 (Arctic, Northern and Southern Control Areas). The vertical dimensions of Class A high level controlled airspace within these areas are as follows:

SCA : 18,000 ASL or from 700 ${ }^{\prime}$ AGL, whichever is higher, to FL600
NCA : FL230 to FL600
ACA : FL270 to FL600
2. Class B*

All low level controlled airspace above 12,500' ASL or from the MEA, whichever is higher, to below $18,000^{\prime}$ ASL. TCAs and associated primary CZs may also be classified Class B airspace.
3. Class $\mathrm{C}^{*}$

TCAs and associated primary CZs may be classified Class C airspace.
4. Class D*

TCAs and associated primary CZs may be classified Class D airspace.
5. Class E*

All high level controlled airspace above FL600 within the SCA, NCA and ACA. Also, low level airways, low level fixed RNAV routes, CAEs, Transition Areas or CZs established without an operating control tower may be classified Class E airspace.
6. Class F

Class $F$ airspace is described in terms of horizontal and vertical dimensions, effective for a specified period of time. Class F airspace may be restricted airspace, advisory airspace, military operations areas or danger areas, and can be controlled airspace, uncontrolled airspace or a combination of both.
7. Class G

Airspace shall be classified $G$ if it has not been designated A, B, C, D, E or F.

* The terminology "Class B, C, D or E equivalent" used for the designations of MTCAs describes the equivalent level of service and operating rules for civilian aircraft operating within the MTCA and under military control.

FLIGHT INFORMATION REGION (See map page M5):
Airspace of defined dimensions extending upwards from the surface of the earth, within which flight information service and alerting service are provided.

HIGH LEVEL AIR ROUTE:
In high level airspace, a prescribed track between specified radio aids to navigation.
HIGH LEVEL AIRSPACE:
All airspace within the CDA 18,000 ${ }^{\prime}$ ASL and above.
HIGH LEVEL AIRWAY:
In controlled high level airspace, a prescribed track between specified radio aids to navigation.
HIGH LEVEL FIXED RNAV ROUTE:
In high level airspace, a prescribed Area Navigation track between specified fixes.
INTERSECTION:
As the circumstances require, this may be:

1. A point on the surface of the earth over which two or more position lines intersect. The position lines may be true bearings from NDBs (magnetic bearings shown on charts for pilot usage); radials from VHF/UHF NAVAIDs; centrelines of airways; fixed RNAV routes or air routes; localizers or DME distances; or
2. The point where two runways, a runway and taxiway, or two taxiways cross or meet.

LOW LEVEL AIRSPACE:
All airspace within the CDA below 18,000 ${ }^{\prime}$ ASL.

## LOW LEVEL AIRWAY:

Controlled low level airspace, extending upwards from 2200 feet above the surface of the earth within the following specified boundaries:

1. VHF/UHF airways based on VORs/VORTACs
a) The primary airway width is 4 miles on each side of the centre line prescribed for such an airway
b) Where applicable, the primary airway width shall be increased between the points where lines, diverging $4.5^{\circ}$ on each side of the centre line from the designated facility, intersect the primary width boundary and where they meet similar lines projected from the other designated facility.
2. LF/MF airways based on NDBs or VHF/UHF airways based on VOR/VORTAC and NDB
a) The primary airway width is 4.34 miles on each side of the centre line prescribed for such an airway.
b) Where applicable, the primary airway width shall be increased between the points where lines, diverging $5^{\circ}$ on each side of the centre line from the designated facility, intersect the primary width boundary and where they meet similar lines projected from the other designated facility.

Where the changeover point is not midway between the NAVAIDS, the airway includes the airspace between the system accuracy lines which extend from the farthest facility, at angles of $4.5^{\circ}$ for VHF/UHF airways, $5^{\circ}$ for LF/MF airways and $5^{\circ}$ for VHF/UHF airways based on a VOR/VORTAC and NDB, to the changeover point and are joined by lines from the nearer facility.

LOW LEVEL AIR ROUTE:
Class G Airspace, extending upwards form the surface of the earth, within the following specified boundaries:

## 1. Air routes based on VORs/VORTACs

a) The primary air route width is 4 miles on each side of the centre line prescribed for such an air route.
b) Where applicable, the primary air route width shall be increased between the points where lines, diverging $4.5^{\circ}$ on each side of the centre line from the designated facility, intersect the primary width boundary and where they meet similar lines projected from the other designated facility.

The primary air route width is 4.34 miles on each side of the centre line prescribed for such an air route.
b) Where applicable, the primary air route width shall be increased between the points where lines, diverging $5^{\circ}$ on each side of the centre line from the designated facility, intersect the primary width boundary and where they meet similar lines projected from the other designated facility.

Where the changeover point is not midway between the NAVAIDS, the air route includes the airspace between the system accuracy lines which extend from the farthest facility, at angles of $4.5^{\circ}$ for VHF/UHF air route, $5^{\circ}$ for LF/MF air route and $5^{\circ}$ for VHF/UHF air route based on a VOR/VORTAC and NDB, to the changeover point and are joined by lines from the nearer facility.

## LOW LEVEL FIXED RNAV ROUTE:

In low level airspace, a prescribed Area Navigation track between specified fixes. For routes in controlled low level airspace, the airspace extending upwards from 2200 feet above the surface of the earth within the following specified boundaries:

1. The primary route width is 10 miles on each side of the centre line prescribed for such a route.
2. The primary route boundary lines do not splay.

MILITARY OPERATIONS AREA:
Airspace of defined dimensions established to segregate certain military activities from IFR traffic and to identify for VFR traffic where these activities are conducted.

MILITARY TERMINAL CONTROL AREA:
Controlled airspace of defined dimensions normally established in the vicinity of a military aerodrome and within which special procedures and exemptions exist for military aircraft. The terminology "Class B, C, D or E equivalent" used for the designations of MTCAs describes the equivalent level of service and operating rules for civilian aircraft operating within the MTCA and under military control.

MINIMUM ENROUTE ALTITUDE:
The published altitude above sea level between specified fixes on airways or air routes which assures acceptable navigational signal coverage, and which meets the IFR obstruction clearance requirements.

MINIMUM OBSTRUCTION CLEARANCE ALTITUDE:
The published altitude above sea level between specified fixes on airways or air routes which meets the IFR obstruction clearance requirements for the route segment.

MINIMUM RECEPTION ALTITUDE:
Minimum reception altitude when applied to a specific VHF/UHF intersection, is the lowest altitude above sea level at which acceptable navigational signal coverage is received to determine the intersection.

MOUNTAINOUS REGIONS (See map page M4):
An area of defined lateral dimensions above which special rules concerning minimum enroute altitudes apply.
NORTHERN CONTROL AREA (See map page M2):

STANDARD PRESSURE REGION (See map page M3):
All CDA that is not designated as the Altimeter Setting Region.

## TERMINAL CONTROL AREA:

Controlled airspace of defined dimensions normally established in the vicinity of one or more major aerodromes and within which air traffic control service is provided based on the airspace classification. The floor of a TCA shall not extend lower than 700 feet AGL.

TRACK:
The projection on the earth's surface of the path of an aircraft, the direction of which at any point is usually expressed in degrees from North (True, Magnetic or Grid).

TRANSITION AREA:
Controlled airspace of defined dimensions extending upwards from 700 AGL unless otherwise specified, to the base of overlying controlled airspace. Even if described with an ASL floor, the base of a Transition Area shall not extend lower than 700 feet AGL.

TRANSPONDER AIRSPACE:
Controlled airspace of defined dimensions within which a functioning transponder incorporating an automatic pressure-altitude reporting device is required.

## USER AGENCY:

The agency, organization or military command responsible for the activity for which Class F airspace has been provided. The User Agency shall be identified for Class F restricted airspace, and where possible, should be identified for Class F advisory airspace.

## 2. NAVIGATION AID AND INTERSECTION/FIX COORDINATES USED TO DESIGNATE AIRSPACE

## 4. DESIGNATION OF LOW LEVEL AIRWAYS AND FIXED AREA NAVIGATION ROUTES

#### Abstract

The airway structure is determined and defined by the type of navaids forming the airway. Intersections/fixes will only be used when required for defining airway turning or termination points. Therefore, the following airway definitions do not include those intersections/fixes that are only required for air traffic control purposes.

All airspace designated in Part 3 is excluded from within airway or fixed RNAV boundaries. The centre line or track of each airway or fixed RNAV route shall be a straight line extended in the manner here under described through the centre of the points specified for the airway or route. The lateral dimensions of airways or fixed RNAV routes are found in Part 1. Non-continuous segments in airways or air routes and some segments within US airspace are marked with an ellipsis (. . .).

The airspace classification for low level airways and fixed RNAV routes is: Class B airspace - Above 12,500' ASL or from the MEA, whichever is higher. Class E airspace - The airspace extending upwards from $2200^{\prime}$ AGL to $12,500^{\prime}$ ASL or to below the MEA, whichever is higher.

## 5. DESIGNATION OF CLASS F AIRSPACE

Class F airspace, as designated in Part 5, is excluded from all airspace designated in Part 3.
Each Danger, Restricted and Advisory Area within Canada has been assigned an identification code group which consists of four parts as follows:

Part a) will consist of the nationality letters "CY"; and
Part b) will consist of the letter "D" for Danger Area, "R" for Restricted Area or the letter "A" for Advisory Area; and
Part c) will consist of a three-digit number which will identify the area. This number will also indicate the region of Canada within which the area lies according to the following table:

| 101 to 199 | - British Columbia |
| :--- | :--- |
| 201 to 299 | - Alberta |
| 301 to 399 | - Saskatchewan |
| 401 to 499 | - Manitoba |
| 501 to 599 | - Ontario |
| 601 to 699 | - Quebec |
| 701 to 799 | - New Brunswick |
|  | - Nova Scotia |
|  | - Prince Edward Island |
|  | - Newfoundland \& Labrador |
| 801 to 899 | - Yukon Territory |
| 901 to 999 | - Northwest Territories and Nunavut (including the Arctic Islands) |

Part d) will, in the case of Advisory Areas, consist of the letter A, F, H, M, P, S or T in brackets after the three digit number to indicate the type of activity within the area as follows:

| A | - Acrobatic |
| :--- | :--- |
| F | - Aircraft Test Area |
| H | - Hang Gliding |
| M | - Military Operations |
| P | - Parachuting |
| S | - Soaring |
| T | - Training |

e.g. The identification code group CYA113(A) is as follows:

| CY | - | indicates Canada |
| :--- | :--- | :--- |
| A | - | indicates Advisory Area |
| 113 | - | indicates the number of the area in British Columbia |
| (A) | - | indicates acrobatic activity takes place within the area |

The whole code group would be deciphered to read: "Acrobatic activity in Advisory Area 113, in British Columbia, Canada."
